Summary

PhD researcher in biomedical engineering focused on machine learning for physiological time-series and multimodal clinical data. Experience developing data-driven models for cardiovascular health using ECG, PPG, and blood pressure waveforms. Strong background in Python, with publications in biomedical engineering venues.

Education

Doctor of Philosophy (PhD), Mechanical Engineering – University of Maryland — *Expected Dec 2027*
Monitoring, diagnosis, and modelling of cardiovascular disease

Master of Science, Mechanical Engineering – University of Maryland — *May 2025*, GPA: 3.9
Notable Courses: Computational Statistics, Machine Learning: Theory and Applications, Applied Machine Learning for Engineering, Optimal Estimation of Dynamical Systems

Bachelor of Science, Mechanical Engineering – Sharif University of Technology — *2022*, GPA: 3.9

Technical Skills

Programming Languages: Python, R, MATLAB

Deep Learning & ML Frameworks: PyTorch, Optuna, Scikit-learn

Methodologies & Algorithms: Signal Processing, Time-Series Analysis, CNNs, RNNs, LSTMs, GRUs, Bayesian Inference & MCMC

Dynamical Systems & Control: System Identification, State Estimation, Kalman Filtering, Nonlinear Control

Research Experience

Graduate Research Assistant, University of Maryland | College Park, MD — *2023 to Present*

❖ **Wearable Hemodynamic Monitoring**
- Collected multimodal physiological data from 20 swine and developed signal-processing and machine-learning pipelines for more than 300,000 cardiac cycles.
- Developed wearable stroke volume estimation models using ECG, PPG, and SCG, achieving a median absolute percentage error of 8.8% during hemorrhage and blood transfusion.

❖ **Vascular Disease Detection**
- Designed CNN models to detect abdominal aortic aneurysm and peripheral artery disease from blood pressure waveforms.

❖ **Cardiovascular Mathematical Modeling**
- Developed mathematical and computational models of cardiovascular dynamics, arterial pressure propagation, and ballistocardiography.

Research Intern, Massachusetts General Hospital | Boston, MA — *Summer 2025*

❖ **Mathematical Modeling of Vasoactive Medication Dose Response**
- Developed a Bayesian inference framework to correct medication dose-change timing errors in retrospective ICU data.
- Analyzed continuous blood pressure and vasoactive medication records to characterize patient-specific dose-response relationships.

Mentorship

University of Maryland, College Park — *Spring 2026*
Mentored an undergraduate research intern and a high school student conducting projects on ballistocardiogram simulation during cold-water immersion and pulse-transit-time-based blood pressure monitoring.

Selected Publications (5 of 11)
